

POGIL Collaborative Worksheets

Student guide

In this guide:

- Getting started
 - How to POGIL
 - References
-

Process-Oriented Guided Inquiry Learning (POGIL) worksheets are stand-alone, hands-on activities completed collaboratively with other students prior to lecturing, to support the discovery of new concepts. We encourage you to complete the activities with a partner.

Why POGIL?

Hands-on learning. Hands-on, active learning where students self-explain (or explain to others), form hypotheses, and build connections collaboratively leads to deeper learning. These POGILs are also doable without a computer, which may help when access to video broadband or a python interpreter is difficult.

Community. Working with a partner provides a sense of belonging in the learning community which results in greater persistence in the face of obstacles.

How to POGIL?

We'll introduce details about POGILing in this document, but the basic steps are below:

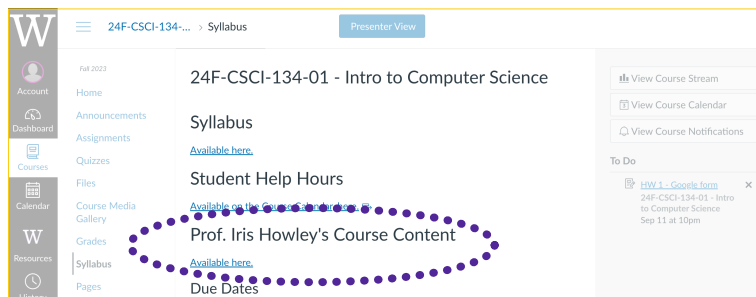

- w Find a study buddy
 - w Set-up a regular 30 minutes/POGIL to work together
 - w Watch the recorded lecture after you complete the POGIL
- 

Find a study buddy. When we have class, you will POGIL with peers seated near you. After class, you may want to set-up a separate meet-up to POGIL with others.

Decide meeting logistics. Choose meeting times to POGIL with peers outside of class. POGILs are distributed on MWF class days (and posted online shortly afterward).

Talk through the POGIL with teammates. POGIL activities are available via Glow > Professor Iris Howley's Class page. Once you've downloaded the POGIL worksheet, it steps you through the discovery of computer programming concepts supporting *thinking like a computer scientist*. Rather than telling you content, POGILs step you through a series of questions that help you discover the information on your own, which is a valuable life-long learning skill.

Watch the pre-recorded lectures after POGILing. Once you've completed the POGIL worksheets, you're ready to watch the lecture videos on Glow > Professor Iris Howley's Class. Now that you've gained some familiarity with the new concepts through POGIL, the lectures provide top-down guidance into the nuances of those concepts.

Ask questions in Student Help Hours. As you're completing the POGILs and watching the lectures, keep track of any questions you may have. Ask your questions in class, or attend instructor Student Help Hours or TA hours (all posted to the course website) with these prepared questions and you will make the most out of your Student Help Hours time!

*POGILs are classroom activities to guide learning.
If you encounter any issues/typos, please let Iris know so she can fix them!*
